WELCOME TO ENVIRO THERMAL COATINGS

where innovation happens

We distribute innovative renovation products across North America. All of our systems come from top-rated manufacturers in Spain, where we source the best renovation products Europe has to offer.

We have dealers across North America, from California, to Florida, and all the way to Alberta, Canada. Because at Enviro Thermal Coatings, we do things differently. We support our dealers, offering training, marketing materials, and operational support. When you join our network, you become part of a team, where we help you succeed.

You join a network of industry professionals focused on quality, commitment, and success.

ABOUT OUR NANO TILE ROOF

Weighing 7X less than clay tile and costing less than half the amount, our Nano Tile Roof is revolutionizing luxury roofing. Home and property owners no longer have to pay the steep price to achieve the clay-style look. And even better, our roofing system is MORE durable.

- 

Leak-Proof
Hidden screws prevent leaks.
- 

Hail-Proof
Only roof tile resistant to hail
- 

Fire-retardant
Additives that resist flames
- 

Wind Resistant
Can withstand hurricane winds
- 

Flexible
Can be used on curved roofs
- 

Maintenance-free
Cleans itself during snow and rain

THE BEST OF NANO TECHNOLOGY

Thermal Insulating Formula

Inspired by the same technology used on space shuttles our proprietary roof tiles are developed using nano technology. Not only does this improve UV resistance, but it also provides thermal insulation. Home and property owners can experience noticeable saving on heating and cooling costs. In addition, our roof tiles also provide noise reduction, effectively minimizing sounds of rain or hail.

ECO-FRIENDLY

Made from Recycled Materials

Not only are our roof tiles fully recyclable, they are also made from recycled materials. By using materials that would pollute our environment, we are helping homeowners improve their eco footprint.

Produces Less CO2

Standard roof tiles emit approximately 3.8 kg of CO₂ per m². Our roofing system emits a fraction of that at 1.6 kg of CO₂ per m². So you can save the planet while saving money.

Increases Energy Efficiency

Because our tile roof system provides thermal insulation and natural ventilation, it also reduces energy usages, effectively saving resources and money.

POPULAR COLORS

Traditional Clay Colored

Our most popular roof tile color! The patented lock-down system joins each panel together, providing unmatched resistance to wind and leaks.

Black

Designed to impress, our black tiles are an alternative to the traditional clay-style. Add some modern luxury to your next project!

Translucent

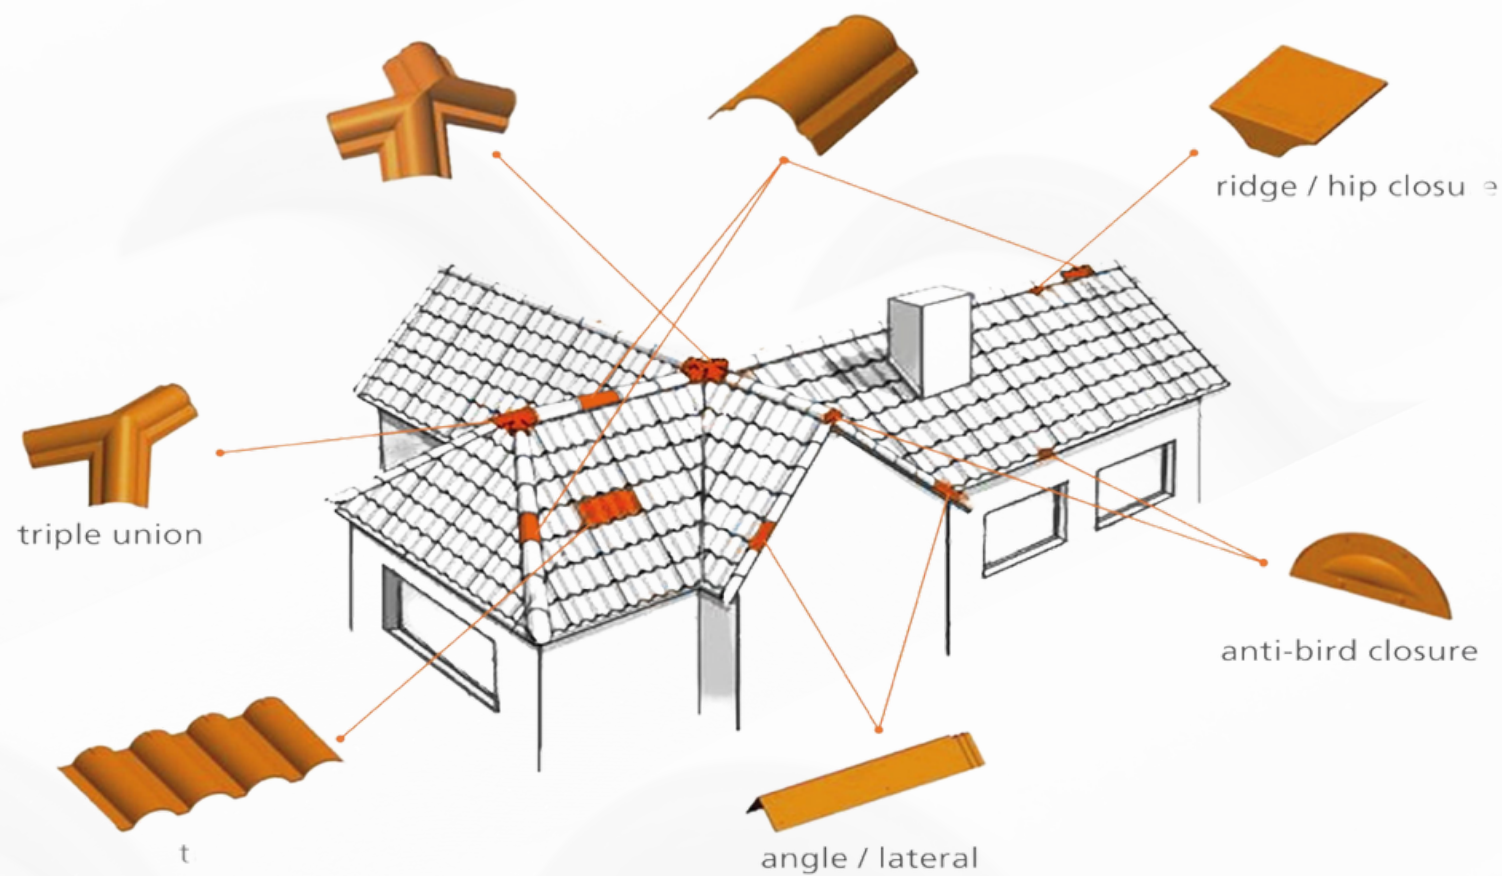

Perfect for terraces, overhangs, gazebos, and more, our translucent tiles allow light to pass through, instantly brightening any space.

More colors are available!

QUICK & EASY INSTALLATION

100% waterproof, our Nano Tile system doesn't require ceramic bricks, mortar or waterproofing membranes. Only **battens are required**. Our lock-down and anchor system also makes it easier to screw down the tiles. And we carry all the parts you need for a fast, easy, and efficient installation.

7 times lighter than traditional clay tiles, our Nano Tile roof will make installation a breeze. Save costs on materials, labour, and shipping when you get exclusive rights to our innovative system.

SUPPORTS EXTREME COLD

Withstands temperatures up to -40° C

Ideal for northern climates, our roof tile can withstand extreme cold. With 25 years of experience and research under its wing, our innovative system is the best roofing system for homes in Canada and in Northern States.

SUPPORTS EXTREME HEAT

Withstands temperatures up to +60°C

Perfect for any regions that experience hot weather and frequent heat waves, our Nano Tile Roof will can withstand extreme heat. Also, because it offers thermal insulation, it can help lower cooling costs during the hottest months.

VIRTUALLY INDISTRUCTABLE

Visit our website to watch us driving over, running across, and throwing rocks on our tile roof.
